PFAS – Certificate of Conformity

Products from Alumeco Group do not contain PFAS.

What is PFAS
Per- and polyfluoroalkyl substances (PFAS) are a large, complex group of synthetic chemicals that have been used in consumer products around the world since about the 1950s. They are ingredients in various everyday products.

PFAS chemicals are used in coatings and products that resist heat, oil, stains, grease, and water. The most well-known might be Teflon coatings on kitchenware.

PFAS in relation to Alumeco products
As we sell basic metal products, typically with no coating, we can safely say that our products do not contain PFAS.

However, this declaration does not cover future surface treatments nor products where the client themselves specify PFAS coatings.

Please do not hesitate to contact us if you need any additional clarification regarding this PFAS declaration.

Best regards,

Thomas Andresen
